

Sesion 1.

1. Use ChatGPT to generate an HTML outline for a Flipkart-style product listing page, including sections for header, search bar, product grid, and footer.
Hint: Try different prompts to see how the structure changes and copy the best outline into a file called product-listing-outline.html.
2. Research and write a short comparison table (4-5 points) showing how Figma AI and Uizard help designers create modern web UIs faster compared to traditional manual design tools.
- 3 .List three ways AI tools like Copilot or ChatGPT can help you speed up front-end development for a Zomato-style restaurant review website, and explain one ethical risk for each usage.
4. Write a prompt you would give to ChatGPT to generate a responsive navigation bar (with Home, Explore, Cart, and Profile links) for a Myntra-style app. Then, paste the prompt and the code snippet ChatGPT returns into a file named myntra-navbar.html.

Constraint: Your prompt must specify both desktop and mobile layout requirements.

Answer: -

2. Comparison Table: Figma AI vs Uizard vs Traditional Design Tools

Feature	Figma AI	Uizard	Traditional Design Tools
UI Generation	Generates layouts from text prompts	Converts ideas/screenshots into UI designs	Manual creation from scratch
Speed	Rapid wireframing and prototyping	Very fast AI-assisted mockups	Time-consuming
Collaboration	Real-time team collaboration	Collaboration features available	Often requires file sharing
Learning Curve	Easy for existing Figma users	Beginner-friendly	Usually steeper learning curve
Productivity	Automates repetitive design tasks	Creates designs with minimal effort	Requires manual design work

3. AI Tools for a Zomato-Style Restaurant Review Website

AI Usage	How It Helps	Ethical Risk
Code Generation	ChatGPT/Copilot can generate React components, review cards, and forms quickly.	Developers may rely on AI-generated code without fully understanding it.
UI Design Suggestions	AI can create layouts, color schemes, and responsive page structures.	Generated designs may unintentionally resemble copyrighted designs.
Content Generation	AI can generate sample restaurant reviews and descriptions for testing.	Fake reviews could mislead users if published as real content.

4. Prompt and Generated Navbar Code

Prompt Used - Generate a responsive navigation bar for a Myntra-style shopping app.

Requirements:

1. Desktop layout should display the logo on the left and navigation links (Home, Explore, Cart, Profile) horizontally on the right.
2. Mobile layout should collapse navigation links into a hamburger menu.
3. Use HTML, CSS, and JavaScript.
4. The navbar should be fully responsive.
5. Add hover effects and smooth transitions.
6. Use modern styling suitable for an e-commerce application.

myntra-navbar.html

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<title>Myntra Navbar</title>

<style>
*{
    margin:0;
    padding:0;
    box-sizing:border-box;
}

body{
    font-family:Arial, sans-serif;
}

.navbar{
    background:#fff;
    display:flex;
    justify-content:space-between;
    align-items:center;
    padding:15px 30px;
    box-shadow:0 2px 8px rgba(0,0,0,0.1);
}

.logo{
    font-size:24px;
    font-weight:bold;
```

```
    color:#ff3f6c;
}

.nav-links{
    display:flex;
    list-style:none;
    gap:20px;
}
