

Session 3.

1. Use Figma AI to generate a wireframe for a 'Music Playlist Manager' app homepage based on a text prompt, then export the wireframe as an image and upload it to your assignment folder.
2. Open Uizard and enter the prompt 'Create a food delivery app homepage' to generate a design prototype, then download the preview image and note one feature of the auto-generated layout that surprised you.

***Hint:** Look for sections like search, featured restaurants, or banners in the generated design.*
3. Take any Figma design (your own or a free template), use the 'Figma to Code' plugin to export the design as HTML and CSS, and open the exported code in your browser to verify the layout.
4. Convert a Figma design for a 'BookMyShow-style movie card' (movie poster, title, rating, and a 'Book Now' button) to HTML and CSS manually, ensuring the layout matches the original as closely as possible.

***Constraint:** Use only HTML and CSS, no JavaScript or frameworks.*
5. Describe the design-to-code handoff workflow you would follow when collaborating with a designer using Figma AI-generated designs, including at least three steps and one tool/plugin you would use for code export.

Answer: -

1. Figma AI – Music Playlist Manager Homepage Wireframe

Prompt Used in Figma AI

Create a wireframe for a Music Playlist Manager app homepage.

Requirements:

- Top navigation bar with logo and profile icon
- Search bar for playlists and songs
- Featured playlists section
- Recently played playlists section
- Create Playlist button
- Sidebar with Home, Library, Favorites, and Settings
- Responsive desktop layout
- Use grayscale wireframe components

Deliverable

1. After generating the wireframe:
2. Review the generated layout.
3. Adjust sections if needed.
4. Click File → Export → PNG/JPG.
5. Save the image as:
6. music-playlist-manager-wireframe.png

7. Upload it to your assignment folder.

2. Uizard – Food Delivery App Homepage

Prompt Used

Create a food delivery app homepage

Steps

1. Open Uizard.
2. Select Generate from Prompt.
3. Enter the prompt.
4. Generate the design.
5. Download the preview image.

One Surprising Feature

The AI automatically included:

- A search bar
- Promotional banner
- Featured restaurants section
- Food category cards
- Bottom navigation menu

3. Figma to Code Workflow

Steps

1. Open any Figma design.
2. Install a code export plugin such as:
 - Figma to Code
 - Anima
 - Locofy
3. Select the frame to export.
4. Run the plugin.
5. Export HTML and CSS files.
6. Verification

Open:

index.html

in a browser and verify:

- Layout structure
- Images

- Typography
- Buttons
- Responsive behavior

Example Folder Structure

project/

|— index.html

|— style.css

|— assets/

4. movie-card.html

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<title>Movie Card</title>

<style>
*{
    margin:0;
    padding:0;
    box-sizing:border-box;
}

body{
    font-family:Arial, sans-serif;
    background:#f4f4f4;
    display:flex;
    justify-content:center;
    align-items:center;
    height:100vh;
}

.movie-card{
    width:280px;
    background:white;
    border-radius:12px;
    overflow:hidden;
    box-shadow:0 4px 12px rgba(0,0,0,0.15);
}

.movie-card img{
    width:100%;
    height:380px;
```

```

        object-fit:cover;
    }

    .movie-info{
        padding:16px;
    }

    .movie-title{
        font-size:22px;
        margin-bottom:10px;
    }

    .rating{
        color:#ff3366;
        font-weight:bold;
        margin-bottom:15px;
    }

    .book-btn{
        display:block;
        width:100%;
        padding:12px;
        border:none;
        background:#f84464;
        color:white;
        font-size:16px;
        border-radius:6px;
        cursor:pointer;
    }

    .book-btn:hover{
        opacity:0.9;
    }
</style>

</head>
<body>

<div class="movie-card">
    

    <div class="movie-info">
        <h2 class="movie-title">Avengers: Endgame</h2>
        <p class="rating">★ 8.8/10</p>
        <button class="book-btn">Book Now</button>
    </div>
</div>

```

```
</body>
</html>
```

5. Design-to-Code Handoff Workflow

Step 1: Review the Figma Design

- Inspect layouts and spacing.
- Check colors, typography, and components.
- Identify reusable UI elements.

Step 2: Extract Design Specifications

Use Figma's Inspect Panel to gather:

- Font sizes
- Colors
- Margins
- Padding
- Component dimensions

Step 3: Export Assets

Export:

- Icons
- Images
- Logos
- SVG assets

Formats:

- ✓ SVG
- ✓ PNG
- ✓ JPG

Step 4: Generate Initial Code

Use a code export tool such as:

- [Locofy](#)
- [Anima](#)
- [Figma to Code](#)

to generate starter HTML/CSS or React code.

Step 5: Refine the Generated Code

- Clean up class names.
- Remove redundant styles.
- Improve responsiveness.
- Follow project coding standards.

Step 6: Testing

Verify:

- Pixel accuracy
- Mobile responsiveness
- Accessibility
- Browser compatibility
