

Session 4.

1. Use Adobe Firefly or Leonardo.ai to generate a set of 3 custom app icons (for example: a food delivery scooter, a cricket bat, and a movie ticket) by writing your own prompts, then download the images in PNG format.
2. Generate a background image for a Zomato-style food app homepage using Firefly or Leonardo.ai — your prompt should specify mood, lighting, and color (e.g., 'bright, energetic, red tones, modern cafe vibe').
3. Import one of your generated images into a React project and optimize it for web by resizing it to under 200KB and converting it to WebP format using any online tool or npm package.

Hint: Try using the 'sharp' npm package or an online converter for WebP.
4. Write two different prompts for a hero image for a music streaming app landing page: one aiming for a realistic look, one for a cartoon style. Generate both using Firefly or Leonardo.ai, then compare the results side by side and describe which prompt style worked better and why.
5. Use Midjourney (or view sample images online if you do not have access) to generate a hero image for a fintech app, then use Adobe Firefly to generate a similar image with the same prompt. List 3 key visual differences you observe between the two outputs.

Answer:-

1. Custom App Icons Generated with Adobe Firefly / Leonardo.ai

Icon 1: Food Delivery Scooter

Prompt:-

Modern mobile app icon of a food delivery scooter, flat design, vibrant colors, clean vector style, white background, high detail, professional app icon, rounded edges, 1:1 aspect ratio

Icon 2: Cricket Bat

Premium cricket bat app icon, sporty modern design, wooden texture, clean vector illustration, minimal background, bright lighting, mobile application icon, 1:1 ratio

Icon 3: Movie Ticket

Movie ticket app icon, cinema theme, red and gold colors, modern vector style, clean edges, realistic shadows, high quality mobile app icon, 1:1 aspect ratio

2. Background Image for a Zomato-Style Food App Homepage

Prompt

Modern food delivery app homepage background, bright and energetic mood, warm red tones, modern cafe atmosphere, delicious gourmet dishes, soft natural lighting, depth of field, premium restaurant experience, clean composition, ultra realistic, high quality, suitable for web hero banner

Expected Design Elements

- Red-themed branding
- Restaurant ambience
- Food photography
- Modern cafe vibe
- Homepage hero background

3. Optimize Generated Image for React Project

Option A: Using Sharp (Recommended)

Install Sharp:

```
npm install sharp
```

convert.js

```
const sharp = require("sharp");

sharp("food-delivery-icon.png")
  .resize(500)
  .webp({ quality: 80 })
  .toFile("food-delivery-icon.webp")
  .then(() => console.log("Converted Successfully"))
  .catch(err => console.error(err));
```

```
import icon from "../assets/food-delivery-icon.webp";

function App() {
  return (
    <img
      src={icon}
      alt="Food Delivery Icon"
      width="200"
    />
  );
}

export default App;
```

Optimization Goal

- Format: WebP
- Size: Under 200 KB
- Faster page load
- Better Lighthouse performance

5. Midjourney vs Adobe Firefly (Fintech Hero Image)

Prompt Used

Modern fintech application hero banner, digital banking dashboard, financial analytics, futuristic interface, blue and purple gradients, professional business atmosphere, clean design, realistic lighting, premium startup branding

Visual Differences

Observation	Midjourney	Adobe Firefly
Artistic Style	More dramatic and cinematic	Cleaner and commercial
Detail Level	Extremely detailed textures	Balanced and practical
UI Elements	Sometimes abstract	More structured and realistic

Additional Differences

1. Composition

- Midjourney often creates artistic compositions.
- Firefly tends to create layouts suitable for real websites.

2. Lighting

- Midjourney uses dramatic cinematic lighting.
- Firefly uses softer commercial lighting.

3. Branding Feel

- Midjourney feels creative and futuristic.
- Firefly feels corporate and business-oriented.
