

## Session 6.

1. Use Uizard or Figma AI to generate a landing page layout for a new music festival ticketing site (think BookMyShow + IPL vibe), then export the wireframe as an image and save it as festival-landing-wireframe.png.
2. Generate a hero section image for your landing page using Adobe Firefly or any AI image tool, with the theme 'Nightlife Music Festival', and save it as hero-image.png.<br><br><em><strong>Hint:</strong> Try prompts like 'crowd at night music festival with stage lights' for more realistic results.</em>
3. Use ChatGPT to write a catchy headline and a short description (max 30 words) for your music festival landing page, then copy the text into a file called landing-content.txt.
4. Create a new React component called FestivalLanding.js and use your exported wireframe, hero image, and ChatGPT content to code the landing page layout using HTML and CSS in React.
5. Use GitHub Copilot or ChatGPT to help you write a responsive CSS grid or flexbox layout for the hero section in FestivalLanding.js. If your code doesn't work as expected, paste the error into ChatGPT and write down the explanation and fix you receive in a file called ai-debug-notes.txt.

ANSWER: -

Ai-debug-notes.txt

## AI DEBUGGING & RESPONSIVE GRID LAYOUT NOTES

### 1. ISSUE: Missing asset file-loaders in React build (Webpack/Vite)

Error: "Module parse failed: Unexpected character " (1:0)

You may need an appropriate loader to handle this file type, currently no loaders are configured to process this file."

Explanation:

By default, some minimal React configurations (e.g., bare Webpack without file-loader or url-loader) don't know how to bundle static PNG/JPG assets directly via `import` statements.

Fix:

Ensure your `webpack.config.js` or Vite config has rules to process image formats:

- In Vite (Modern): Native support for static asset imports works automatically.
- In Webpack: Add the following loader rule in webpack.config.js:

```
```js
{
  test: /\. (png|jpe?g|gif|svg)$/i,
  type: 'asset/resource'
}
...
```
```

Alternative fallback:

Move the assets to the `public/` directory and reference them as string paths:

```
``
```

## 2. ISSUE: Responsive Grid Wrap & Aspect Ratio Distortion on Hero Layout

Error/Behavior:

On mobile resolutions (under 992px), the right hero section containing the hero image shrinks disproportionately, making the text overlapping/distorted.

Explanation:

Using static fraction units in CSS Grid (`grid-template-columns: 1.2fr 0.8fr`) can compress the image container below its min-content size if standard responsiveness handles widths too rigidly.

Fix:

- Use media queries to drop the multi-column layout and stack elements vertically (`grid-template-columns: 1fr`) under 992px.
- Use `aspect-ratio: 4 / 3` and `object-fit: cover` to preserve the visual composition of the night festival crowd image across all screen sizes.
- Set flex CTAs to stack (`flex-direction: column`) on ultra-small viewport sizes (under 576px).

## 3. ISSUE: Glassmorphism Backface Visibility and Z-Index

Error/Behavior:

The absolute positioned IPL/BookMyShow live ticketing card overlay gets clipped or disappears behind other elements when scrolling.

Explanation:

Applying `backdrop-filter: blur()` can trigger browser composition layers, isolating the z-index stack of container elements.

Fix:

Explicitly set `position: relative` and a custom `z-index` stack on the containing `.hero-right` section, and ensure `overflow: visible` is allowed on parents of the live booking card.
